Rohan Menon

(518) 831-0633 · www.rohanmenon.com · rmenon1008@gmail.com

An engineering graduate with a focus on software development, embedded devices and networking who loves working on challenging problems in fast-paced collaborative teams.

Education

University of Washington   Graduating December 2023
B.S. Electrical and Computer Engineering · GPA: 3.4/4

Relevant coursework: *The Hardware/Software Interface · Computer Networks · Computer Architecture · Network Security and Cryptography · Digital Imaging Systems*

Experience

Research Assistant   Feb 2022 - Present
UW Sensor Systems Laboratory

WISP · rohanmenon.com/s/wisp - a family of batteryless sensors that are powered by and communicate entirely through UHF RFID power harvesting and backscatter.

- Developed hardware and embedded firmware for a new, modular, generation of WISP devices.
- Designed and built a cross-platform desktop application to collect and visualize data from WISP.
- **R. Menon**, R. Gujarathi, A. Saffari, J. Smith, "[Wireless Identification and Sensing Platform Version 6.0](#)", EnsSys 2022

Deep Contact Graph Routing · rohanmenon.com/s/dcgr - a collaboration with [Astrobotic](#), developing new routing protocols for the Moon, funded by a NASA ESI grant.

- Built ray-tracing based, GPU-accelerated, simulator for modeling RF propagation between agents.
- Created open-source framework for simulating networking between mobile agents.
- D. Ta, **R. Menon**, J. Taggart, A. Tettamanti, S. Feaser, P. Torrado, J. Smith, "[Roaming DTN: Integrating Unscheduled Nodes into Contact Plan Based DTN Networks](#)", CCAA 2023

Projects

Resonant · rohanmenon.com/s/resonant   Nov 2020 - Jun 2021
A system to localize and identify ambient noises and present them to a user through a wearable display.

- Developed a 3D sound localization algorithm using a microphone array with phase shift estimation and created a heads-up display to communicate this information to a user.

Aquametric · rohanmenon.com/s/aquametric   Oct 2018 - Dec 2020
Low power, cellular-based, stream and river monitoring devices. Won a Hackaday Bootstrap Award and was a finalist for the Hackaday Prize 2020, an international competition for open-source electronics.

- Developed firmware enabling features like OTA updates and a variable sensor uplink cadence.
- Created a backend and web interface for consuming data from the sensors in real time.

Skills

Embedded
- Firmware development
- FreeRTOS
- Digital and analog circuits, PCB design

Web development
- Python, Rust, C/C++
- Frontend (JS/TS, React, web design)
- Flask, Django
